1. Which of these is the best definition of "Generative AI"?  Artificial intelligence systems that can map from an input A to an output B. Any web-based application that generates text.  Any web-based application that generates text. After any produce high quality content, such as text, images, and audio. Afrom of web search.  Which of these is the most accurate description of an LLM? It generates text by repeatedly predicting the next word. It generates text by using supervised learning to carry out web search.  It generates text by using supervised learning to carry out web search. It generates text by finding a writing partner to work with you. It generates text by finding a writing partner to work with you. Alarge Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions. trillions of examples of text from the internet.  True or False. Because an LLM has learned from web pages on the internet, its answers are always more trustworthy than what you will find an the internet.  True Correct Correct Correct A Lange Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions. trillions of examples of text from the internet.  1/1 point True False False False False  Correct Pacause LMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  ### Why do we call Al a general purpose technology?  Because it is useful for many different tasks. Expects the substitutions because it is useful for many different tasks. Expects the substitution of the paceased via the general web.

A form of web search.  Correct Generative AI refers to a collection of tools that can generate high quality text, images, and audio, including large language models (LLMs) and diffusion models for image generation.  1/1 point  It generates text by repeatedly predicting the next word.  It generates text by using supervised learning to carry out web search.  It generates text by repeatedly predicting words in random order.  Correct A Large Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions - trillions of examples of text from the internet.  True or False. Because an LLM has learned from web pages on the internet, its answers are always more trustworthy than what you will find on the internet.  True  False Correct Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  1/1 point  Why do we call AI a general purpose technology?  Place are always it is useful for many different tasks.  Because it is useful for many different tasks.  Because it includes both supervised learning and generative AI.		Any web-based application that generates text.	
Correct Generative AI refers to a collection of tools that can generate high quality text, images, and audio, including large language models (LLMs) and diffusion models for image generation.  1/1 point  1/1 point  1/1 point  1/1 point  1/1 point  1/1 generates text by repeatedly predicting the next word.  It generates text by using supervised learning to carry out web search.  It generates text by finding a writing partner to work with you.  It generates text by repeatedly predicting words in random order.  Correct A Large Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions - trillions of examples of text from the internet.  True or False. Because an LLM has learned from web pages on the internet, its answers are always more trustworthy than what you will find on the internet.  True  False  Correct Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. Why do we call AI a general purpose technology?  Because it is useful for many different tasks.  Because it is useful for many different tasks.  Because it is useful for many different tasks.		Al that can produce high quality content, such as text, images, and audio.	
Cenerative AI refers to a collection of tools that can generate high quality text, images, and audio, including large language models (LLMs) and diffusion models for image generation.  1/1 point  1/2 Which of these is the most accurate description of an LLM?  1/1 generates text by prepeatedly predicting the next word.  1/2 generates text by using supervised learning to carry out web search.  1/2 generates text by finding a writing partner to work with you.  1/2 generates text by repeatedly predicting words in random order.  1/2 Correct  A Large Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions - trillions of examples of text from the internet.  1/1 point  1/1 point  1/1 point  1/1 point  1/1 point  1/1 point  2/3 True or False. Because an LLM has learned from web pages on the internet, its answers are always more trustworthy than what you will find on the internet.  1/1 point  1/1 point  2/4 Why do we call AI a general purpose technology?  2/4 Why do we call AI a general purpose technology?  2/4 Why do we call AI a general purpose technology?  2/4 Why do we call AI a general purpose technology?  2/4 Point  2/4 Why do we call AI a general purpose technology?  2/4 Point		A form of web search.

Ocrrect A Large Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions - trillions of examples of text from the internet.  3. True or False. Because an LLM has learned from web pages on the internet, its answers are always more trustworthy than what you will find on the internet.  ○ True  ● False  Ocrrect Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. Why do we call AI a general purpose technology?  ● Because it is useful for many different tasks.  ○ Because it can chat.  ○ Because it includes both supervised learning and generative AI.			
A Large Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions - trillions of examples of text from the internet.  3. True or False. Because an LLM has learned from web pages on the internet, its answers are always more trustworthy than what you will find on the internet.  True  False  Correct  Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. Why do we call Al a general purpose technology?  Because it is useful for many different tasks.  Because it includes both supervised learning and generative Al.			
you will find on the internet.  True False  Correct Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. Why do we call Al a general purpose technology?  Decause it is useful for many different tasks.  Because it can chat.  Because it includes both supervised learning and generative Al.		A Large Language Model (LLM) has been trained to repeatedly predict the next word using 100 billions - trillions of	
you will find on the internet.  True False  Correct Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. <ul> <li>False</li> <li>Correct         Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.</li> <li>Why do we call Al a general purpose technology?         <ul> <li>Because it is useful for many different tasks.</li> <li>Because it can chat.</li> <li>Because it includes both supervised learning and generative Al.</li> </ul> </li> </ul>	3.		1/1 point
Correct Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. Why do we call Al a general purpose technology?  1/1 point  Because it is useful for many different tasks.  Because it can chat.  Because it includes both supervised learning and generative Al.		○ True	
Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in situations where factual accuracy is important.  4. Why do we call AI a general purpose technology?     Decause it is useful for many different tasks.		False	
<ul> <li>Because it is useful for many different tasks.</li> <li>Because it can chat.</li> <li>Because it includes both supervised learning and generative AI.</li> </ul>		Because LLMs can hallucinate (make up facts), it is best to fact-check the response from an LLM before using it in	
<ul> <li>Because it is useful for many different tasks.</li> <li>Because it can chat.</li> <li>Because it includes both supervised learning and generative AI.</li> </ul>			
<ul> <li>Because it is useful for many different tasks.</li> <li>Because it can chat.</li> <li>Because it includes both supervised learning and generative AI.</li> </ul>			
Because it can chat.  Because it includes both supervised learning and generative AI.	4.	Why do we call AI a general purpose technology?	1/1 point
Because it includes both supervised learning and generative AI.		Because it is useful for many different tasks.	
		Because it can chat.	
Because it can be accessed via the general web.		Because it includes both supervised learning and generative AI.	
		Because it can be accessed via the general web.	

$(\mathcal{A})$	$C \circ$
$ \mathbf{V} $	CU

General purpose technologies are, by definition, designed to be versatile and useful for a wide range of tasks. This broad utility across various applications is what characterizes AI as a general purpose technology.

5. You hear of a company using an LLM to automatically route emails to the right department. Which of these use cases is it most likely to be?

1/1 point

- The company has a software-based application that uses an LLM to automatically route emails.
- Employees are copy-pasting the emails into a web interface to decide how to route them.

## $\odot$ (

## Correct

A software-based application that uses an LLM to automatically read and route emails can process many emails automatically as they are received. So it is most likely the company is using a software-based application to carry out this work.
